PROFESSIONAL SUMMARY

I am a Cloud DevOps Engineer with 4+ years of hands-on experience designing, automating, and operating AWS-based infrastructure and containerised Java applications using Terraform, Docker, and EKS. I focus on building reliable CI/CD pipelines, infrastructure as code, and automated deployments to improve system availability and delivery cadence.

I specialise in cloud-native deployments and operational engineering, delivering measurable reliability and performance gains. For example, I automated Terraform-based provisioning and Jenkins/GitHub Actions pipelines to reduce deployment time by 60%, improved uptime to 99.9%, and introduced monitoring with CloudWatch and ELK to cut mean time to recovery by 45%, aligning closely with the Junior DevOps Engineer role requirements.

CORE SKILLS

- Stakeholder communication and cross-functional collaboration
- Operational ownership of cloud environments and CI/CD delivery
- Incident investigation, root cause analysis, and remediation
- Deployment reliability and release automation
- Problem-solving and troubleshooting networking and load balancing
- Documentation, runbooks, and runbook-driven incident response
- Automation-first mindset and Infrastructure as Code governance
- Security-conscious configuration and access control practices

TECHNICAL SKILLS

- AWS (EC2, S3, IAM, VPC, Route 53, ECR, EKS, ELB, CloudWatch, Lambda)
- IaC: Terraform modules, CloudFormation basics, Ansible playbooks
- Containerisation and orchestration: Docker, Kubernetes, Amazon EKS, Helm
- CI/CD: Jenkins, GitHub Actions, GitLab CI, Bitbucket Pipelines
- Monitoring & logging: CloudWatch, Prometheus, Grafana, ELK Stack, Loki
- Scripting: Python, Bash, PowerShell for automation and tooling
- Secrets management: AWS Secrets Manager, HashiCorp Vault
- Version control and GitOps practices using Git, branching and IaC repos

WORK EXPERIENCE

Cloud DevOps Engineer | LamTech Limited — Apr 2025 - Dec 2025

- Designed and provisioned AWS infrastructure (VPC, subnets, EC2, ECR, EKS, ALB, IAM, Route 53) using Terraform modules, reducing manual environment setup time by 80% and enforcing reproducible IaC patterns.
- Containerised a Java CRM application with Docker and deployed to Amazon EKS using Helm charts, achieving 3x improved deployment consistency and enabling horizontal autoscaling for high availability.

• Built and maintained CI/CD pipelines with Jenkins and GitHub Actions, implementing blue/green deployment strategies to enable zero-downtime releases and reduce rollback time by 70%.
• Implemented monitoring and alerting with CloudWatch and ELK Stack, and configured Prometheus exporters on EKS to surface application metrics, reducing MTTR by 40% through improved observability and runbooks.
• Applied cloud security best practices by implementing least-privilege IAM roles, AWS Secrets Manager integration, and image scanning in CI to reduce security exposure during deployments.

DevOps Engineer | Astro Data Limited (LookFantastic project) Jun 2023 - Dec 2024

• Architected and delivered CI/CD pipelines using Jenkins and Bitbucket, integrating Maven builds and automated tests to increase release frequency by 50% while preserving stability.
• Automated infrastructure provisioning with Terraform and Ansible for multi-environment deployments, improving consistency and deployment velocity by 40% and enabling repeatable disaster recovery snapshots.
• Containerised microservices with Docker and managed lifecycle using Docker Compose and Kubernetes, cutting infrastructure costs by 20% and improving service scalability.
• Integrated centralized logging and monitoring with ELK Stack and Grafana, and introduced alerts and runbooks to reduce incident MTTR by 45% and improve service availability to 99.8%.
• Collaborated with developers on application configuration, DNS and HTTP troubleshooting, and load balancing tuning to resolve production outages and improve response times by 30%.

DevOps Engineer | Astro Data Limited (Medbase project) May 2022 - May 2023

• Provisioned and maintained AWS resources (VPC, EC2, Security Groups, RDS) using Terraform, reducing manual provisioning errors by 70% and documenting disaster recovery procedures.
• Built and operated EKS clusters with Vault integration for secrets management, and configured Kubernetes liveness and readiness probes to improve service resilience and reduce downtime by 25%.
• Developed Jenkins pipelines with Groovy and Maven to orchestrate automated deployments, cutting deployment time by 60% and supporting multiple environments (dev, staging, prod).
• Deployed EFK Stack and implemented structured logging to accelerate troubleshooting, decreasing time to identify root cause by 35%.
• Authored Ansible playbooks and AWX job templates for configuration management across hybrid Linux environments, and created AMI bake pipelines to reduce provisioning time from 45 minutes to under 10 minutes.

EDUCATION

B.Sc. Business Administration, Babcock University, Nigeria 2013
